Organizational Scans:

Project Name: Wine Delivery - Website

Tools and Programming Languages: Html, CSS, HTML5, CSS3, JavaScript, JQuery and Bootstrap, Visual Studio Code

Project Brief: As most of the people in foreign countries likes to drink wine and champagne, and also used to gift their relatives and known ones on special occasions like wedding, retirement or anniversary, sparkling direct has started the wine delivery all over the United Kingdom. This website is a product-based website which is developed for the branding and sales of various types of wines and champagne in the United Kingdom. This is a fully responsive website and anyone from the UK can place orders for their favorite wines from this website and can track their orders on real time basis.

Roles & Responsibilities:

- Discuss the client requirements over the client calls with great communication skills and able to optimize application in terms of technology and in delivering the best user experience.
- To work with the UX design team to bridge the gap between graphic design and technical implementation, taking an active role in defining how the application looks, as well as how it works.
- Translate design wireframes into the code that will produce visual elements of the application.
- Significant contribution towards translating our client needs and expectations into interactive web app.
- Added the necessary responsive design for display and full functionality on tablet and mobile.
- Managed client relationships, project scopes, and timelines.
- Application worked across mobile devices (primary use case) and modern desktop browsers.
- Design new features or maintain old features.
- Stay up to date with emerging technologies.

Project Name – DMS for efficient Distribution Management

Tools and Programming Languages: HTML5, CSS3, JavaScript, React JS, Syncfusion Library, Reactstrap Library, Visual Studio Code, Postman

Project Brief – A Distribution Management System (DMS) is a software Platform that helps organizations manage the movement and delivery of goods from warehouse or distribution center to end customer. A DMS is typically designed to handle various aspects of distribution process, including inventory management, order processing, shipment tracking, and logistics optimization.

Roles & Responsibilities:

- Developed & maintained the user interface for the DMS using React, ensuring that it was responsive, user-friendly, and aligned with the project requirements.
- Worked collaboratively with the project team to integrate the React components with other parts of the DMS system, such as the inventory management & order fulfillment modules.
- Built custom components for managing customer data, including billing information & shipping preferences.

Project Name – Manufacturing & Administrative ERP tool

Tools and Programming Languages: HTML5, CSS3, JavaScript, React JS, Syncfusion Library, Reactstrap Library, Visual Studio Code, Postman

Project Brief – Company has its own objectives, processes, and requirements. Today's businesses need technologies with complete functions which can bridge the gap between business processes and people. To run an organization with multiple departments andteam successfully, and ERP system gives a helping hand by synchronizing all information & communication within the organization.

Roles & Responsibilities:

- Developed & maintained the user interface for the ERP tool using React, ensuring that it was responsive, user-friendly, and aligned with the project requirements.
- Collaborate with the project team to integrate the React components with other parts of the ERP system.
- Developing different modules of web applications using React Js, HTML, CSS
