SUMMARY

Skilled software developer specializing in frontend development, with expertise in designing and building both Web and Android applications from the ground up.

SKILLS

React JS | HTML5 | JavaScript | CSS3 | Firebase | Flutter | Git | REST APIs | Testing Frameworks | Frontend Frameworks | MUI | Redux

ACHIEVEMENTS

- Recognized as Top Performing Intern of Batch 2023 in Beehyv.
- Mentored junior developers, ensuring adherence to best practices.

CERTIFICATES

- LinkedIn Certification In redux toolkit
- Web Development By CourseEra
- Career Essentials in Software Development by Microsoft and LinkedIn
- LinkedIn Certification in Programming Foundations

EDUCATION

Chitkara University, Rajpura
Bachelor of Engineering
2019-2023
CGPA: 9.53

Work Experience

Beehyv Software Solutions, Hyderabad, India

Software Developer ***July 2022 - Present***

- Certified and customized the DIGIT framework, the world's largest open-source platform for public service delivery, to meet specific project requirements.
- Leveraged micro-frontend architecture to modularize and efficiently manage the solutions side module, improving scalability and maintainability.
- Developed web and mobile applications using React, Flutter, and various libraries, delivering high-quality user experiences and seamless backend integration.
- Collaborated with UX/UI designers, backend developers, and project managers to deliver responsive, user-friendly interfaces.
- Participated in regular code reviews, and team meetings, integrating feedback to enhance usability and performance.

PROJECTS

PUCAR: ECourt Platform

- Dynamically created forms and screens using the **DIGIT-Frontend framework**, enabling extensive customization and control.
- Designed reusable UI components with a **component-based approach**, improving maintainability and scalability.

DFS (Digital Farmer Service): Android Application

- Implemented utility functions and used **Flutter with GetX** for state management and modular data processing, ensuring **code optimization**.
- Designed and implemented dynamic forms using the **flutter_form_builder** library with JSON, integrating seamlessly with custom screens for various schemes.

Rice Fortification:

- Customized **Ag-grid** for interactive rice batch data visualization, improving batch and lot detail management.
- Designed dynamic forms using **react-JSON schema-form (RJSF)** and implemented **Firebase** notifications to maintain real-time counts and ensure accurate redirection.

BeeSheet :

- Extended **react-big-calendar** for dynamic schedule management, including custom colour coding for current data and holidays.
- Created a reusable error-handling service with **Redux** to display messages based on status codes across the application.
