Professional Summary

Full-stack software engineer with 2+ years of experience independently delivering AI-driven platforms and SaaS tools in fast-moving environments. I specialize in turning vague product ideas into working systems, fast. Built and shipped AI interview bots, RAG based chat assistants, and self-serve enterprise dashboards using React, Next.js, Node.js, GenAI, and modern web stacks. My work has improved automation, cut recruiter effort, and boosted user engagement by up to 50%. I thrive in early-stage chaos, think like a product owner, and code like a builder.

Technical Skills

Languages : TypeScript, JavaScript, Python, HTML, CSS
Frontend : React.js, Next.js, Vue.js, Redux Toolkit, Vuex, Tailwind CSS, Material UI, SASS, CSS Modules, Shadcn
Backend : Node.js, Express, FastAPI, MongoDB, MySQL, Google Apps Script
DevOps & Tools : Docker, Jenkins, GCP, AWS EC2, Linux Servers, PM2, Git, Postman
AI/LLM : OpenAI API, Azure OpenAI, Langchain, Context Engineering, RAG, Puppeteer, Handlebars

Experience

SDE-2 | **OT-Marketplace** *September 2024 – Present*

- **EuropaAI - Screening Interview Platform: Next.js, React.js, Socket.io, Redux Toolkit, GenAI, Tailwind CSS, MySQL, Docker**
- Led end-to-end development of EuropaAI's MVP as the primary developer, successfully delivering a comprehensive AI-powered interview platform
- Built key features including an AI-powered personalized interviewer system and video recording functionality, enhancing the recruitment process automation
- Developed a responsive, multi-stage admin dashboard for recruiters using React.js and Tailwind CSS, enabling efficient candidate management and evaluation
- Implemented containerization using Docker for both recruiter and interviewer applications, optimizing deployment processes and ensuring consistent environment setup

SDE-1 | **OT-Marketplace** *December 2022 – September 2024*

- **OT.Coach - AI-Enabled Assistant To Improve Employee Performance: Next.js, React.js, Redux Toolkit, GenAI, Tailwind CSS, MongoDB, Google Apps Script**
- Implemented custom GenAI-powered educational assistants using RAG (Retrieval Augmented Generation), enhancing personalized learning experiences for users
- Built a high-performance chat interface utilizing React.js and Next.js, resulting in seamless real-time conversations with AI assistants and a 50% improvement in user engagement
- Developed and deployed custom AI assistants in Google Chat using Google Apps Script, streamlining team collaboration and automating workflow processes across the organization
- **Self Serve: Next.js, React.Js, Redux Toolkit, Material UI, Handlebars, Express.js**
- Created a self-serve platform using React.js and Next.js, enabling user registration and PDF profile generation using Handlebars, Puppeteer, and EJS.
- Implemented component-based architecture using React.js UI components with Redux Toolkit and Material UI, ensuring users only accessed data relevant to their roles, enhancing security
- Achieved a 30% reduction in page load time through optimization and caching strategies, improving performance and user experience.

Software Engineering Intern | **OT-Marketplace** *August 2022 – December 2022*

- **Course Generator Admin Application: Vue.js, Vuex, Vuetify, CSS Modules, SASS, Jenkins**
- Developed scalable UI components using Vue and Vuetify and integrated REST APIs for internal administrative tools, enhancing functionality.
- Contributed to a 15% increase in workflow efficiency by streamlining feature management, leveraging CSS Modules for component styling.
- web forms state, error handling, and debugging using Vue.js and Vuetify, significantly improving performance and user experience.

Education

KGCE, Karjat **Bachelor of Computer Science Engineering** | CGPA: 7.86 *August 2018 – May 2022*

- Course: Data Structures & Algorithms, Web Development, Software Engineering
- Developed "SELLABLE" - A machine learning-powered car price prediction web application using Python, Streamlit, and Random Forest Regression, deployed on Streamlit Cloud
- Implemented ML pipeline including data preprocessing, model training in Jupyter Notebook, and interactive web interface development using Streamlit, achieving accurate price predictions for cars valued between 3-25 Lakhs
- Created comprehensive documentation and prepared technical presentations, demonstrating project management and communication skills
