PROFILE

Frontend Developer with 4+ years of experience in building responsive, high-performance web applications using React.js and modern JavaScript (ES6+). Proven ability to collaborate with cross-functional teams to deliver user-centric features and scalable interfaces.

EDUCATION

Visvesvaraya Technological University *Bangalore, India*

Bachelor of Engineering 2015 – 2020

SKILLS

Frontend: React.js, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, TailwindCSS, Bootstrap

Tools & Libraries: React Router, Axios, Jest, React Testing Library, Vite

Backend Integration: RESTful APIs, GraphQL

Version Control & CI/CD: Git, GitHub, GitLab

DevOps/Cloud (Basic): Docker

Others: Performance Optimization, Code Splitting, Lazy Loading, Agile/Scrum

CERTIFICATIONS

- Jspiders (Full Stack Development)

EXPERIENCE

Utthunga Technologies *Bangalore, India*

Frontend Developer Jun 2021 – Present

- **Built** 20+ **modular and reusable UI components** in React.js and TypeScript for an enterprise dashboard, reducing development time by **30%** for future modules.
- **Integrated RESTful APIs** and implemented robust error handling to ensure **99.9% uptime** for real-time asset and telemetry data.
- **Collaborated** with cross-functional teams including PMs and designers to convert Figma prototypes into pixel-perfect, responsive UI, improving customer satisfaction scores by **15%**.
- **Introduced unit and integration testing** with Jest and React Testing Library, reducing post-release bugs by **40%** over two quarters.
- **Optimized performance** using React.memo and lazy loading, improving initial load time by **2.5 seconds** across key views.
- **Mentored 3 junior developers**, leading to a **25% increase** in team productivity by standardizing component patterns and documentation.

PROJECTS

SESUITE (Smart Enterprises) Jun 2021 – Present

React.js, TypeScript, Next.js, Postgres, Java, GraphQL

- Developed dynamic, component-based interfaces in React and Next.js for real-time asset monitoring and management.
- Integrated GraphQL APIs for fetching telemetry and status data from edge devices to ensure accurate asset insights.
- Enabled predictive maintenance and optimized utilization by building intuitive data visualizations and filtering mechanisms.

SIMULATION – uSimulate HART System Jun 2021 – Aug 2023

React.js, TypeScript, Next.js, Postgres, Java, GraphQL

- Created a fully responsive frontend for simulation management of HART devices, facilitating real-world scenario emulation.
- Implemented configurable dashboards that allow users to create, run, and monitor simulations through an intuitive UI.
- Enabled user training and device testing by accurately simulating HART protocol operations via a centralized system.

EDM (Edge Device Management) Jun 2023 – Aug 2024

Angular, Material UI, Postgres, Java

- Built and maintained a unified web portal for configuring and monitoring edge devices and gateway systems.
- Developed features for analyzing heartbeat intervals and real-time device health monitoring.
- Collaborated across teams to integrate Edge Stack capabilities for local data processing and fail-safe operations in low-connectivity environments.

VTS (Vehicle Tracking System) Jun 2023 – Present

React Js, Mantine ui, Postgres, Java, GraphQL, Quarkus

- Designed and implemented a secure Vehicle Tracking System (VTS) using SeSuite Central for real-time GPS-based vehicle monitoring.
- Developed an interactive map interface for live tracking, trip history visualization, and stop/duration analysis.
- Built trip history and reporting modules to generate detailed route, stop, and performance analytics.
- Implemented role-based user and device management for secure multi-user access.
- Integrated robust backend services to process GPS data, enforce business logic, and manage data flow.
- Utilized a scalable database for storing user, device, and trip data with HTTPS encryption for secure transmission.
